

MTSA 2023 Sanitary Sewer Rates

The Authority received notice from DELCORA that the annual DELCORA wastewater treatment costs will increase by 6% for calendar year 2023. To address the increase in the DELCORA sanitary sewer treatment costs, the MTSA annual residential sewer treatment rate will be adjusted from \$630 per equivalent dwelling unit to \$665 (5.5% increase) for the calendar year 2023. The quarterly base rate for the commercial and industrial users will be increased from \$173.65 to \$183.20 (5.5%), plus an increase in the charge for every 1,000 gallons consumed over 24,000 gallons per quarter from \$7.18 to \$7.57 (5.4%).

The Authority sincerely appreciates all the support it receives from its residential and commercial customers. The Authority will continue to strive to maintain a safe and reliable sanitary sewer system and keep rates as low as possible. We continue to urge all residential and commercial property owners to ensure that no rain or groundwater is permitted to enter the public sanitary sewer system via sump pumps, condensate lines, downspouts, foundation drains, broken pipes, or slotted vents and cleanouts. If not controlled, the costs associated with treating rain and groundwater could ultimately result in future rate increases.
